GEORGIU COMPLETES WORK ON TIANQI LITHIUM HYDROXIDE PROCESSING PLANT PROJECT (TLK LHPP PROJECT)

Friday, 3 August 2018

MSP Engineering Pty Ltd (MSP) is pleased to announce that Georgiou Group has completed work on both stages of the Tianqi Kwinana Lithium Hydroxide Production Plant under construction at Kwinana in Western Australia.

“Georgiou has placed more than 24,000 cubic metres of concrete on the project, working to an extremely tight timeframe,” said MSP Managing Director Peter McSweeney. “The work has included some technically exacting foundation and pier elements, which have all been completed safely, which is a major achievement for all involved.”

When complete, Stage 1 of the lithium hydroxide plant will produce 24,000 tonnes per annum of the highest purity, battery grade lithium hydroxide in the marketplace and will supply approximately 60% of the world’s battery grade hydroxide. Stage 2, due for completion in 2019, will double output to 48,000 tonnes per year from the combined facility.

The projects add significant value to the Western Australian economy with a strong focus on local content and community engagement.
